

PRODUCT DATASHEET

 English (EN)

Product: Link Set
Product Code: GHT 9314

A set of six, one metre lengths of compensating cable with a thermocouple plug at either end. The link cable is used to connect the programmer or recorder to the transformer. The thermocouple plugs at either end would be inserted into the panel mounted thermocouple sockets on the rear of the transformer and the other end into the programmer. There would then be an additional set of link cables running from the thermocouple sockets in the programmer to the recorder enabling all equipment in the set to be linked together.
